

Web Mapping Services

You can now subscribe to Pixxures' central image library through fast, convenient and simple portal desktop applications in real time; providing the user with a mechanism to track usage of your imagery while at the same time providing a mechanism for imagery providers to receive royalty revenues.

Hosting Services

Pixxures' comprehensive Hosting Services are designed to facilitate maximum use and easy distribution of your digital mapping information throughout your organization. In response to industry needs and the continued increase in outsourcing of hosting services, Pixxures has developed an infrastructure centered on imagery and digital mapping information.

Hosting Services Advantages

- Data preparation, compression, and backup storage of imagery
- Enterprise storage & deployment
- Account administration and usage reports
- Over 100 terabytes of high-speed data storage
- 24 x 7 network and server monitoring and access
- Fully redundant facilities on separate grids
- High-speed network and Internet connectivity
- UPS (Uninterruptible Power Supply) system with multiple backup batteries, diesel and natural gas generators
- On-site fuel storage that allows at least 36 hours of self-sufficient operations in the event of a power outage
- Laser smoke detection and double pre-action dry pipe fire suppression system

Web Mapping Services

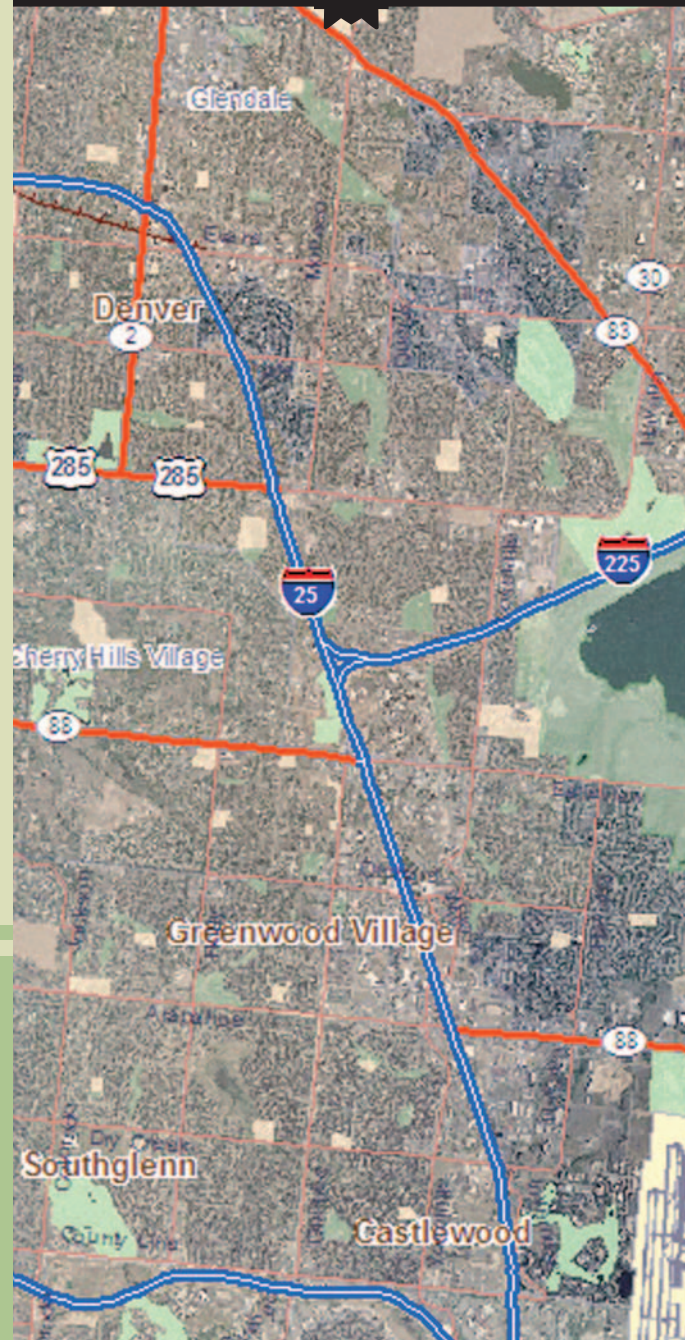

Pixxures' Web Mapping Services provide your organization with immediate access to affordable imagery, directly into your desktop applications. We are an established industry-leader in Web mapping expertise in the hosting, storage, management, dissemination and delivery of imagery and digital mapping information – critical decision support tools.

- ArcXML, WMS and WFS compliant Web services integrate seamlessly into existing applications
- Imagery re-projection on-the-fly
- Expertise with latest ArcGIS Server and Image Server technologies
- Capability to rapidly develop PDA deployment of imagery and vector data support

Image Store Advantages

- Provides unlimited previewing of imagery and digital mapping information
- All metadata from the library is stored in a database and world files are delivered with the imagery
- Geocoding options allow immediate, site-specific retrieval based on address, intersection, place names, latitude/longitude, or DOQQ file name
- Imagery and map data can be dynamically re-projected and formatted to suit specific user needs

Pixxures' image library can be accessed via the Internet 24 x 7.
